Response to Amendment

Applicant's amendment dated 02/22/2001 has been received and entered.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

1. Claims 1, 2, 4, 7-10, 13-19, 28-32, 36-37, 39, 42-49, 51-54 and newly added claims 63-64 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Mawatari et al., US Patent No. 5,200,847 as stated in the previous office action.

Regarding claims 1, 2, 4, 28, 39, 42, 43 and 63-64, although such claims are now amended, such amendment are not sufficient to overcome its rejection in the previous Office Action. It should be noted that the limitation "a driver circuit comprising thin film transistors that are formed from a stick substrate separate from said substrates and are peeled from said stick substrate after the formation and are adhered to said one of the substrates by said resin adhesive layer" recites a one-step process which does not further limit the structure of the claimed invention. Therefore, the process limitation does not have patentable weight.

Regarding claims 7-10, 13-19, 29, 30-32, 44-47, 49 and 51-54, Applicants contend that Mawatari et al. do not disclose a passivation film covering the driver circuit and having a contact hole to allow an electrical connection between at least one of the TFTs and the pixel circuit, wherein the contact hole has a tapered configuration (amendment, page 6). The Examiner is not

Art Unit: 2871

convinced by this argument since the structure as defined is inherently formed in the active matrix LCD structure as stated in the previous office action.

2. Claims 22, 23, 27, 55-57, 33-35 and 61-62 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Mawatari et al., US Patent No. 5,200,847, in view of Watanable et al., US Patent No. 4,643,526, as stated in the previous office action.

Applicants argue that Watanable et al. fail to disclose the driver circuit comprising TFTs and connecting to the substrate through a metal bump. The Examiner agrees with Applicants that Watanable et al. do not explicitly the driver circuit comprising the TFTs. However, it is well known in the art that a driver circuit is made of TFTs as evidence from Mawatari et al. Therefore, it would have been obvious to one skill in the art to form an LCD device of Mawatari et al. having a metal bump as stated in the previous office action. In addition, as mention above, IC chip can be made by TFTs, so as the combination of Mawatari and Watanable is proper.

Double Patenting

3. Claims 1, 2, 4, 7-10, 13-19, 22-24, 27-37, 39, 42-49, 51-58 and 61-62 stand rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 5 and 17 of U.S. Patent No. 5,834,327, as stated in the final office action.

Applicant's request that a formal response to the Double Patenting rejection be held in abeyance until other rejections are resolved is acknowledged.

Conclusion

4. Applicant's arguments filed 02/22/2001 have been fully considered but they are not persuasive.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
